1. SCOPE OF SUPPLY -

Furnish and install TSURUMI Model LB-480-62 Submersible Pump(s).
Each unit shall be capable of delivering _______GPM (_______ m³/min) at _______ Feet (_______ m) TDH.
The pump(s) shall be designed to pump wastewater, without damage during operation. The pump(s) shall be
designed so that the shaft power required (BHP)/(kW) shall not exceed the motor rated output throughout
the entire operating range of the pump performance curve. Pump(s) shall be of the top flow through design.

2. MATERIALS OF CONSTRUCTION -

Construction of major parts of the pumping unit(s) shall be as follows: Pump casing shall be synthetic rubber.
Motor frame shall be aluminum alloy die casting. Internal and external surfaces coming into contact with the
pumpage shall be protected by a fused polymer coating. All exposed fasteners shall be stainless steel. All
units shall be furnished with 2" NPT discharge connector. Impellers shall be of the multi-vane, urethane
rubber, semi-vortex solids handling design and shall be slip fit to the shaft. The motor shaft shall be machined to
provide a positive drive of the impeller.

3. MECHANICAL SEAL -

All units shall be furnished with a dual inside mechanical shaft seal located completely out of the pumpage,
running in a separate oil filled chamber and further protected by an exclusionary oil seal located between the
bottom seal faces and the fluid being pumped. The oil chamber shall be fitted with a device that shall provide
positive lubrication of the top mechanical seal, (down to one third of the standard oil level). The device shall not
consume any additional electrical power. Mechanical seals shall be rated to preclude the incursion of water up to
13.9 PSI. (32 Ft.) submergence. Units shall have silicon carbide mechanical seal faces. Mechanical seal
hardware shall be stainless steel.

4. MOTOR -

The pump motor(s) shall be 2/3 Hp., 0.48 kW., 115 or 230 V., 60 Hz. 1 Phase and shall be NEMA MG-1,
Design Type B equivalent. Motor(s) shall be rated at 6.1 or 3.0 full load amps. Motor(s) shall have a 1.15 service
factor and shall be rated for 10 starts per hour. Motor(s) shall be air filled, copper wound, class E insulated with
built in thermal protection. Motor shaft shall be 403 stainless steel, fitted with a replaceable, stainless steel shaft
tsleeve and shall be supported by two permanently lubricated, high temperature ball bearings, with a B-10 life
rating at best efficiency point of 60,000 hours. Bearings on all units shall be single row, double shielded, C3,
deep groove type ball bearing.

5. POWER CABLE AND CABLE ENTRANCE -

The pump power cable shall be suitable for submersible pump applications. The cable entrance shall incorporate
built in strain relief, a one piece, three way mechanical compression seal with a fatigue reducing cable boot. The
cable entrance assembly shall contain an anti-wicking block to eliminate water incursion into the motor due to
capillary wicking should the power cable be accidentally damaged.
